

LESS IS MORE

Cargo movements worldwide are at risk from moisture and humidity. When shipments are transported between varying climates, condensation occurs which destroys your valuable cargo. The new InterDry Power Desiccants prevents mold, fungus, mildew and corrosion in container shipments.

No kraft paper Required

By absorbing excess moisture in the air, it prevents the relative humidity from reaching dew point and condensing, thus preventing condensation and the need to use kraft / mump paper.

Leak proof

Our desiccants are packed in special Tyvek® and Spunbond packing that allows only one way absorption, thus ensuring the desiccants are completely leakproof and efficient too.

Fewer units, More savings

With twice as much absorption than other desiccants you use fewer units than with other desiccants, which means more savings for every container you ship.

No more Condensation

InterDry Power Desiccants are guaranteed to ensure your container shipments remain condensation free.

The safe, sure and cost effective humidity solution you'll ever need.

150% more

InterDry Power Desiccants are designed to absorb more than 150% than its weight.

With superior absorption capacity, you don't need to worry anymore about moisture condensation

Leak proof

This unique product converts the absorbed moisture into a cake thus preventing it from leaking. Its special SPUNBOND packing ensures one way absorption only thus retaining the absorbed moisture completely.

The product

Keeping in mind the different needs of our customers, our products are designed in various sizes to fit your needs.

Our products are available in 1000 gms and 500gms, which suits most purposes. Other sizes can be manufactured on demand.

Lower relative humidity

InterDry controls the humidity inside containers by preventing the air from reaching dew point and condensing, thus protecting your precious cargo.

Non-toxic

InterDry Power Desiccants are completely non-toxic and environmentally safe, which means they can be safely used with agricultural and food products. Moreover they can be easily disposed of as they are completely harmless.

Fewer units, less space, more savings

Higher absorption means you can use fewer units than other desiccants, and with its compact design, InterDry saves you valuable loading space, all which translates to more savings for every container you use.

we protect

Agriculture - Coffee, Tea, Cocoa, Copra, Pepper, Ginger, Cashew, Ground nuts, Rice, Flour, Starch, Vegetables, Fruit, Tobacco.

Wood Products- Paper, Furniture, Timber, Moldings, Wood pulp.
